---

## PROFESSIONAL SUMMARY

Backend-focused Computer Engineering student skilled in Spring Boot, REST APIs, JWT authentication, and scalable backend system design. Built real-world projects including rate limiting systems, RBAC authentication, caching layers, and AI-powered RAG applications using Java, FastAPI, and SQL databases. Passionate about backend engineering, API security, and building production-ready applications.

## TECHNICAL SKILLS

Languages: C, C++, Java, Python, JavaScript

Backend: Spring Boot, Spring Security, REST APIs, JWT Authentication, FastAPI, Microservices

Frontend: React.js, HTML, CSS, Tailwind CSS

Databases : MySQL, MongoDB, PostgreSQL

Tools & Platforms : Git, GitHub, Postman, Swagger, Maven, Vercel

## PROJECTS

### JIRA-Style Task Management System | Spring Boot, React.js, MySQL | [GitHub](#)

- Developed microservice-based task management platform using Spring Boot, React, and MySQL.
- Designed 15+ REST APIs for authentication, project workflows, task assignment, and status tracking.
- Implemented JWT-based authentication and role-based access control for secure project collaboration.
- Optimized relational database schema for task relationships, user mapping, and workflow tracking.

### RAG Based Document Q&A System | Spring Boot, React.js, FastAPI | [GitHub](#)

- Built AI-powered document question-answering platform using Retrieval-Augmented Generation (RAG).
- Implemented document upload pipeline with text chunking, embedding generation, and vector similarity search.
- Developed backend APIs for query handling, authentication, and conversation history management.
- Improved contextual response accuracy using semantic retrieval and embedding-based ranking.

### Role-Based Access Control (RBAC) System | Spring Boot, Java, React.js | [GitHub](#)

- Developed secure authentication and authorization system using Spring Boot, JWT, and MySQL.
- Built admin management module for handling users, roles, and permission assignments.
- Secured protected endpoints using token-based authorization and Spring Security.
- Designed scalable RBAC architecture supporting extensible permission management.

### Distributed Rate Limiter API | Spring Boot, Java | [GitHub](#)

- Built API rate limiting system using Spring Boot to control excessive client requests.
- Implemented fixed window request throttling logic for per-user and per-endpoint access control.
- Developed middleware/interceptor-based request filtering to prevent API abuse.

## EXPERIENCE

### Frontend Developer Intern | Omega Soft

- Developed responsive web interfaces for a Housing Management System using HTML, CSS, and JavaScript
- Implemented core modules including property listings, tenant management, and rent tracking dashboards.
- Added dynamic client-side functionality with JavaScript to improve user interaction and form handling.
- Ensured cross-browser compatibility and mobile responsiveness across all application screens.
- Collaborated with backend developers to integrate APIs and maintain seamless data flow.
- Improved frontend component structure and responsiveness using modern React.js practices.

## EDUCATION & CERTIFICATIONS 2022 – 2026

- BACHELOR'S DEGREE | Computer Engineering | MES Wadia College, Pune

2022– 2026
